ANIMATION STYLES

Creator Studio · what it supports today, and what can be added

Every reel is rendered as full HD 9:16 video (1080 × 1920) ready for Reels, TikTok and Shorts. Papercut pieces animate at 12 fps (each frame held twice, for a hand-moved stop-motion feel); the 3D flip-book runs at a smooth 30 fps. The same paper kit also makes still carousels and images.

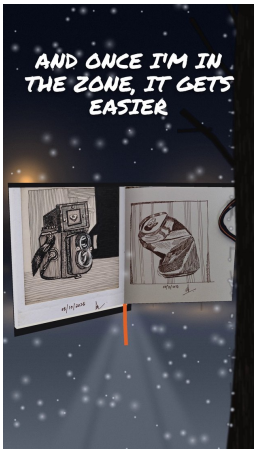

Built in

Papercut stop-motion

Every element is a paper cut-out (torn sheets, taped art prints, caption strips, stars) that slides, drops or pops into place, with a slight per-frame “boil” so it looks moved by hand.

Where it's used: the weekly sketchbook tour reel and all three Creator Studio ads
Ask for it: “Make it a papercut stop-motion reel.”

3D flip-book

An open sketchbook floats in a snowy night street and turns its pages in 3D. Each turning page curves and catches the light, and the camera drifts gently.

Where it's used: the sketchbook flip-book reel
Ask for it: “Do it as a 3D flip-book.”

Flip-book over your own footage

The same turning book with a transparent background, laid over a video clip you supply (your studio, your desk, a walk outside). No sample in this guide: it needs your clip.

Where it's used: available as an option of the flip-book renderer
Ask for it: “Float the flip-book over this clip of my studio.”

Creator Studio · what it supports today, and what can be added

Torn-paper scene wipes

Each new scene arrives as a full-screen sheet of paper sliding in from the left, right, top or bottom, with a torn leading edge and a soft shadow.

Where it's used: every scene change in the papercut reel and the ads
Ask for it: “Use paper wipes between scenes.”

Collage build-up

Pieces drop in one after another to fill a grid or a loose pile, e.g. a 10-day tracker filling up, or every painting of the week landing in a heap.

Where it's used: the “day 1 … day 10” tracker and the outro pile
Ask for it: “Show my week filling up day by day.”

Orbit / motion paths

Any piece can follow a path. In the sketchbook reel the paintings orbit a centre piece (“you make your whole life revolve around it”).

Where it's used: the “revolve around it” scene
Ask for it: “Have my paintings orbit the centre one.”

ANIMATION STYLES

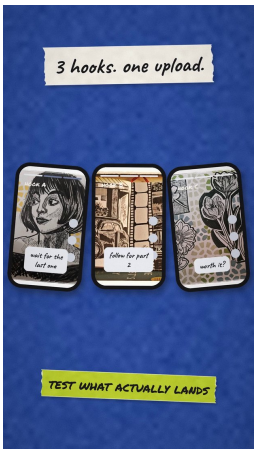

Creator Studio · what it supports today, and what can be added

Animated GIFs inside a scene

A looping GIF plays inside a taped paper print, so animated art moves while everything else stays papercut.

Where it's used: the neon cat in the sketchbook reel
Ask for it: “Use my animated GIF as one of the prints.”

Phone mock-up playback

A reel plays inside a phone, with Reels-style progress bars, side icons and a caption bubble. Several phones can play side by side (e.g. hook A / B / C).

Where it's used: all three ads
Ask for it: “Show three versions playing on phones.”

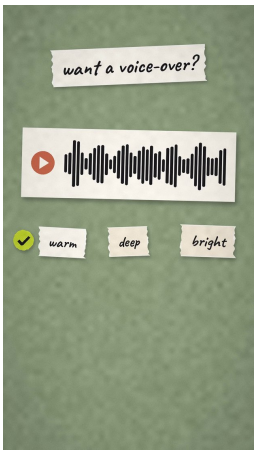

Typed text reveal

Text types itself across a card, left to right, like a chat message being written.

Where it's used: the “ask Claude” prompt cards in the ads
Ask for it: “Type the prompt out on screen.”

Animated voice waveform

A looping waveform card with a play button, used to show a voice-over.

Where it's used: the voice-over scenes in the ads
Ask for it: “Show a voice waveform while it talks.”

Still collages (carousels and images)

The same paper kit laid out as still images: 4:5 carousel slides, 1:1 feed posts and 9:16 story images.

Where it's used: the Creator Studio carousels and single-image ads
Ask for it: “Turn this into a 6-slide carousel.”

Creator Studio · what it supports today, and what can be added

Motion moves you can mix

Move	What it does	Works with
Drop	Falls in from slightly above, shrinking and straightening as it lands.	any piece
Pop	Springs up from nothing with a small overshoot.	any piece, captions, stickers
Slide in	Enters from the left, right, top or bottom with a slight tilt.	any piece, full scenes
Fade in / out	Fades opacity in or out.	any piece
Shrink out	Shrinks to nothing on exit.	any piece
Slide out	Leaves the frame in any direction.	any piece
Boil	Tiny per-frame jitter in position and rotation: the stop-motion look.	papercut pieces
Path	Follows any route (orbit, arc, zig-zag) with its own rotation and scale.	any piece
Frame loop	Plays a sequence of frames (GIF, video, waveform) in place.	prints, phones, cards
Wipe reveal	Reveals left to right (typing, ink strike-throughs).	text, strike-throughs
Page turn	3D page flip with curl and lighting.	flip-book
Camera drift	Slow, gentle camera sway around the scene.	flip-book
Caption pop	Caption scales up with a spring and fades out at the end.	flip-book captions
Fade to dark	Scene dims at the end.	flip-book ending

Not built yet (can be added on request)

These would need new code. None of them is in the renderers today.

Style	What it would be
Ken Burns pan and zoom	Slow zoom and pan across a still photo or painting.
2.5D parallax	Foreground and background layers moving at different speeds for depth.
Split screen / before-after	Two clips side by side, or a slider wiping from sketch to finished art.
Hand-drawn line reveal	Ink lines drawing themselves on, like a time-lapse sketch.
Zoom and whip transitions	Fast punch-in or blurred whip pans between scenes.
Beat-synced cuts	Scene changes timed to the beats of a music track.
Other video shapes	1:1 and 4:5 video renders (stills already come in 1:1, 4:5 and 9:16).
