FILTERS

Creator Studio · nine colour filters and your own colour grades, on everything it makes

Nine colour filters plus your own colour grades (.cube LUT files) can go on anything Creator Studio makes: the papercut reel, the 3D flip-book, the ads, the carousels and images, or any finished video or image, with the voice-over and audio kept. Every filter has a strength from 0 to 1. Each preview below is made by the filter code itself, on the same painting, so you can compare.

COLOUR FILTERS

Original
no filter

Black and white bw

Sepia sepia
warm brown old-photo tone

Warm warm
golden and cosy

Cool cool
crisp and blue

High contrast contrast
deeper shadows, brighter highlights, richer colour

Faded matte matte
lifted blacks, softer contrast

Duotone duotone
cobalt shadows, mustard highlights

VHS vhs
colour split, scanlines and a rolling tracking wobble

Poster / riso riso
a few flat colours with print grain

Strength

Add :0.5 (or any value from 0 to 1) to blend a filter in partly. Below: sepia at 25%, 50% and 100%.

sepia:0.25

sepia:0.5

sepia:1

How to use them

To filter	Ask for it / run
An ad	“Make the artists ad warm.” python3 make_ads.py artists --filter warm
An ad with its voice-over	python3 make_ads.py artists --filter warm python3 make_voiceover.py artists --filter warm
The papercut reel	python3 make_video.py --filter vhs:0.6
The 3D flip-book	python3 make_flipbook.py --filter cool (also with --bg your_clip.mp4)
Carousels and images	python3 make_carousels.py creators --filter duotone
Anything already made	python3 filters.py IN.mp4 OUT.mp4 --filter sepia:0.8 Works on videos (audio kept), images, or a whole folder of slides.
Your own colour grade	python3 make_ads.py beginners --lut my_grade.cube python3 filters.py IN.mp4 OUT.mp4 --lut my_grade.cube --filter contrast:0.4
See them all	python3 filters.py --list python3 filters.py --showreel IN.mp4 OUT.mp4

Filtered files are saved next to the originals with the filter in the name (for example ad_artists_you_paint_warm.mp4), so nothing is overwritten. LUTs are standard 3D .cube files as exported by DaVinci Resolve, Premiere, Lightroom and most colour-grading apps; the LUT is applied first, then the filter. VHS and riso move a little from frame to frame, like real tape and print grain; the other filters are steady, so videos don't flicker.

ALSO PART OF THE STYLES

Film grain + vignette
on every papercut frame; the grain changes each frame

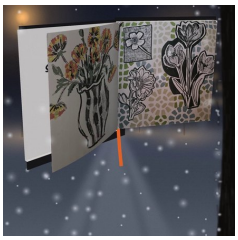

Defocus blur
flip-book backgrounds, foreground tree

Haze
misty horizon in the night scene

Fade to dark
ending dim of the flip-book

Night scene grade
cool blue night with warm lamps (flip-book)
